

- c/ (b) providing a local application program on the wireless terminal which in an off-line mode has read and write access to the data in the virtual memory.

39. (New) A wireless terminal method comprising:

ca (a) providing a memory on the wireless terminal which in an on-line mode is adapted to be treated as local virtual memory by an application program running on a server to read and write data in the virtual memory related to the application program;

and

SCB
EL (b) providing a local application program on the wireless terminal which in an off-line mode has read and write access to the data in the virtual memory;

wherein in the off-line mode, when the application program running on the server modifies data at the server the application program running on the server establishes a data session with the wireless terminal and updates corresponding data in the virtual memory and when the local application program modifies particular data in the virtual memory the local application program outputs a message, to the server, containing updates for at least some of the particular data.
